

ASTRAL

Visual comfort

Lighting and well-being

Light does not only make the world visible, it also influences us on different levels: biorhythm, emotions, moods, perception of time, activities and well-being in general.

We are related to nature by the dynamics of daylight and its ever-changing lighting characteristics. ASTRAL transforms the qualities of outdoor light inside your healthcare space.

Aseptic conditions

EKLER has put aseptic conditions at the forefront of its design approach to prevent any potential risk of contamination likely to occur in the healthcare space. Just like the quality of the light, ASTRAL boasts an undeniable lead when it comes to hygiene maintenance. It is fitted with a smooth diffuser for surface cleaning and disinfecting like all the appliances of treatment rooms.

It is fully sealed thereby preventing dust from building up inside the light.
